

# CURODONT™ REPAIR FLUORIDE PLUS

## Dental Coding Recommendations in the US

Guided Enamel Remineralization with **CURODONT REPAIR FLUORIDE PLUS** should be performed within a Caries Risk Management (D0601-0603) environment and should be accompanied by Nutrition Counselling (D1310), Oral Hygiene Instructions (D1330).

**CURODONT REPAIR FLUORIDE PLUS:** After discussions with insurance providers, the most suitable code is D1354 (Caries arresting medicament). If you feel that this code does not adequately provide for the treatment, D1999 is an alternative option (more detailed report required). Please note that dental codes and their usage vary between states and dental benefits systems. Please check with your dental benefits programs for the most suitable code.
